Flea Treatment Preparation

Fleas are very difficult to eradicate without your ...help! We have developed a special checklist for our customers to complete during and after the treatment process. We ask that you please review this worksheet and complete all items listed. When this checklist is followed we have discovered that not only are our treatments faster and more effective, but it also costs our customers less time and money in the long run.

Items That Must Be Completed Prior To Our Arrival:

Be prepared to vacate the dwelling during service and for 4 hours following service to allow time for chemicals to dry. Do not enter or allow children or pets to enter the treated structure for at least 4 hours unless specified otherwise.

Clear all carpeted floors - of boxes, clothing and any other items that will prevent treatment. Place dishes, silverware, pet food dishes and children's toys in protected area.

Wash (in hot water) or destroy all pet bedding. If bedding is put into trash, put into sealable plastic bag and dispose of into an exterior trash bag.

Mop wood, tile and vinyl floors.

Vacuum all carpeting and rugs thoroughly. Carefully vacuum pet sleeping and resting areas - under furniture, cracks and crevices in floors and draperies. Vacuum furniture - especially between and under cushions. Empty the contents of the vacuum cleaner into a plastic bag. Immediately dispose of the bag in an outside container.

Remove all pets and birds, also shut off air in fish tanks, and cover. Store or cover all pet food containers and bowls.

Have dogs, cats and other flea-infested pets professionally treated by your local veterinary clinic at the same time the home is treated.

After Our Treatment Is Complete:

Do not enter for a full 4 hours after the treatment is completed. Immediately upon entering the treated structure after the treatment, open all windows and doors and air out thoroughly.

DO NOT clean carpets or floors with detergents or cleaners for at least one month after treatment are complete.

Continue to vacuum daily for two weeks. Be sure to dispose of the bag after each vacuuming (in an exterior trash bin).

Follow up treatment will be scheduled 10-14 days from initial treatment. It may require more follow up visits.

An exterior treatment may be necessary as well.
